

MANAN SHARMA

MCA (AI & ML) — MIT-WPU Pune

✉ sharmamanan275@gmail.com | 📞 +91-9828932000 | 📍 Pune, Maharashtra

🌐 linkedin.com/in/manan-sharma-780b13254 | 🐙 github.com/MANANSHARMA275 | 🌐 manansharma275.github.io

Career Objective

Backend-focused MCA student (AI & ML) with production experience in Python and Flask — REST APIs, relational schema design, asynchronous pipelines, and automated testing. I find real operational problems, define what the system must do, and ship it: a compliance SaaS in production and a deployed developer tool this year. Seeking software engineering and applied AI roles.

Education

MIT World Peace University

Master of Computer Applications (MCA) — AI & ML Electives | CGPA: 7.60

Pune, Maharashtra

08/2025 – 05/2027

ICFAI University

Bachelor of Computer Applications — AI & IoT | Percentage: 74.50%

Jaipur, Rajasthan

07/2022 – 05/2025

Technical Skills

Languages: Python, C++, SQL, JavaScript

Backend & APIs: Flask · REST API Development · Celery · Redis

Databases & Testing: PostgreSQL · SQLAlchemy · Flask-Migrate · Pytest

Data & ML: Pandas · NumPy · Supervised Learning · CatBoost · Streamlit · Statistics & Probability

Developer Tools: Git · GitHub · Claude Code (specification-and-review workflow)

Projects

MineralLaw.in — Mining Compliance Platform (Co-Founder) | Flask, PostgreSQL, Celery, Redis

2026 – Present

- Tracks statutory compliance deadlines for mining lease holders and sends automated WhatsApp reminders ahead of each due date.
- Built a rule-based deadline calculator driven by a central configuration of statutory rules, with fingerprint-based idempotency so repeated pipeline runs never create duplicate events.
- Implemented an asynchronous reminder pipeline on Celery Beat with timezone-correct scheduling, and a delivery task guarded by consent checks, a kill switch, and database-level duplicate constraints.
- Designed for data minimisation: phone numbers stored masked in delivery records, with a paginated and filterable admin delivery log for auditing.
- Covered by a 301-test Pytest suite across unit and integration layers, with schema changes version-controlled through Flask-Migrate. 🐙 github.com/MANANSHARMA275/minerallaw

Tokenmeter — LLM Inference Cost Calculator | JavaScript, HTML, CSS — zero dependencies

2026

- Shipped a single-page tool computing monthly LLM cost across six model tiers with live recomputation, budget-based recommendation, and USD/INR localisation — pricing defaults verified against provider pages; three hand-written files, no frameworks. 🌐 manansharma275.github.io/Tokenmeter
- Fixed a spec-level focus-loss race in live table reordering via caret-preserving re-renders and state-guarded input validation; verified in headless Chromium, with full keyboard accessibility and prefers-reduced-motion support. 🐙 github.com/MANANSHARMA275/Tokenmeter

Food Delivery Time Prediction | Python, CatBoost, Streamlit

- Delivery-time regression model trained on 45,593 orders; engineered geo features (haversine and Manhattan-proxy distance, distance buckets) and repaired invalid coordinates using a city-wise median strategy.
- CatBoost reached MAE 5.70 minutes and RMSE 7.26 (R^2 0.40) on a held-out 20% test split — a 7.3% RMSE improvement over a linear-regression baseline and 4.4% over Random Forest.
- Deployed as a Streamlit application performing live ETA prediction with input and coordinate validation. 🐙 github.com/MANANSHARMA275/food-delivery-eta-prediction

Certifications

Machine Learning with Python | IBM / Coursera

October 2024

Mastering Data Structures & Algorithms using C and C++ | Udemy — Abdul Bari

Feb 2026 – Present

100 Days of Code: The Complete Python Pro Bootcamp | Udemy — Dr. Angela Yu

Feb 2026 – Jul 2026

Achievements & Activities

- Identified the MineralLaw.in opportunity independently — existing compliance portals serve regulators and large operators, not small lease holders — then defined the product scope and built it from an empty repository.
- Work with AI coding assistants under a specification-and-review workflow: write the technical plan, review the proposed implementation against it, and verify every change independently before commit rather than accepting generated code as correct.
- Built and presented working prototypes in two-person teams under time-boxed hackathon conditions, including YOLO Pune 2026 at MIT-WPU.
