

MANAN SHARMA

MCA (AI & ML) — MIT-WPU Pune

✉ sharmamanan275@gmail.com | 📞 +91-9828932000 | 📍 Pune, Maharashtra

🌐 [linkedin.com/in/manan-sharma-780b13254](https://www.linkedin.com/in/manan-sharma-780b13254) | 🐙 github.com/MANANSHARMA275 | 🌐 manansharma275.github.io

Career Objective

Backend-focused MCA student (AI & ML) with production experience in Python and Flask — REST APIs, relational schema design, asynchronous pipelines, and automated testing. I find real operational problems, define what the system must do, and ship it: a compliance SaaS in production and a deployed developer tool this year. Seeking software engineering and applied AI roles.

Education

MIT World Peace University

Master of Computer Applications (MCA) — AI & ML Electives | CGPA: 7.60

Pune, Maharashtra

08/2025 – 05/2027

ICFAI University

Bachelor of Computer Applications — AI & IoT | Percentage: 74.50%

Jaipur, Rajasthan

07/2022 – 05/2025

Technical Skills

Languages: Python, C++, SQL, JavaScript

Backend & APIs: Flask · REST API Development · Celery · Redis

Databases & Testing: PostgreSQL · SQLAlchemy · Flask-Migrate · Pytest

Data & ML: Pandas · NumPy · Supervised Learning · CatBoost · Streamlit · Statistics & Probability

Developer Tools: Git · GitHub

Projects

MineralLaw.in — Mining Compliance Platform (Co-Founder) | *Flask, PostgreSQL, Celery, Redis* 🐙 2026 – Present

- Tracks statutory compliance deadlines for mining lease holders and sends automated WhatsApp reminders ahead of each due date.
- Built a rule-based deadline calculator driven by a central configuration of statutory rules, with fingerprint-based idempotency so repeated pipeline runs never create duplicate events.
- Implemented an asynchronous reminder pipeline on Celery Beat with timezone-correct scheduling, and a delivery task guarded by consent checks, a kill switch, and database-level duplicate constraints.
- Designed for data minimisation: phone numbers stored masked in delivery records, with a paginated and filterable admin delivery log for auditing.
- Covered by a 301-test Pytest suite across unit and integration layers, with schema changes version-controlled through Flask-Migrate.

Tokenmeter — LLM Inference Cost Calculator | *JavaScript, HTML, CSS — zero dependencies* 🌐 🐙 2026

- Shipped a single-page tool computing monthly LLM cost across six model tiers with live recomputation, budget-based recommendation, and USD/INR localisation — pricing defaults verified against provider pages; three hand-written files, no frameworks.
- Fixed a spec-level focus-loss race in live table reordering via caret-preserving re-renders and state-guarded input validation; verified in headless Chromium, with full keyboard accessibility and prefers-reduced-motion support.

Food Delivery Time Prediction | *Python, CatBoost, Streamlit* 🐙

- Delivery-time regression model trained on 45,593 orders; engineered geo features (haversine and Manhattan-proxy distance, distance buckets) and repaired invalid coordinates using a city-wise median strategy.
- CatBoost reached MAE 5.70 minutes and RMSE 7.26 (R^2 0.40) on a held-out 20% test split — a 7.3% RMSE improvement over a linear-regression baseline and 4.4% over Random Forest.
- Deployed as a Streamlit application performing live ETA prediction with input and coordinate validation.

Certifications

Machine Learning with Python | *IBM / Coursera*

October 2024

Mastering Data Structures & Algorithms using C and C++ | *Udemy — Abdul Bari*

Feb 2026 – Present

100 Days of Code: The Complete Python Pro Bootcamp | *Udemy — Dr. Angela Yu*

Feb 2026 – Jul 2026

Achievements & Activities

Identified the MineralLaw.in opportunity independently — existing compliance portals serve regulators and large operators, not small lease holders — then defined the product scope and built it from an empty repository.

Work with AI coding assistants under a specification-and-review workflow: write the technical plan, review the proposed implementation against it, and verify every change independently before commit rather than accepting generated code as correct.

Built and presented working prototypes in two-person teams under time-boxed hackathon conditions, including YOLO Pune 2026 at MIT-WPU.
