

MANAN SHARMA

MCA (AI & ML) — MIT-WPU Pune

✉ sharmamanan275@gmail.com | 📞 +91-9828932000 | 📍 Pune, Maharashtra

🌐 linkedin.com/in/manan-sharma-780b13254 | 🐙 github.com/MANANSHARMA275 | 🌐 manansharma275.github.io

Career Objective

Backend-focused MCA student (AI & ML) with production Python and Flask experience — REST APIs, schema design, async pipelines, automated testing. I find real operational problems, define what the system must do, and ship it. Seeking software engineering and applied AI roles.

Education

MIT World Peace University

Master of Computer Applications (MCA) — AI & ML Electives | CGPA: 7.60

Pune, Maharashtra

08/2025 – 05/2027

ICFAI University

Bachelor of Computer Applications — AI & IoT | Percentage: 74.50%

Jaipur, Rajasthan

07/2022 – 05/2025

Technical Skills

Languages: Python, C++, SQL, JavaScript

Backend & APIs: Flask · REST APIs · Celery · Redis

Databases & Testing: PostgreSQL · SQLAlchemy · Flask-Migrate · Pytest

Data & ML: Pandas · NumPy · Supervised Learning · CatBoost · Streamlit · Statistics

Developer Tools: Git · GitHub · Claude Code (specification-and-review workflow)

Projects

MineralLaw.in — Mining Compliance Platform (Co-Founder) | Flask, PostgreSQL, Celery, Redis

2026 – Present

- Tracks statutory compliance deadlines for lease holders and sends automated WhatsApp reminders before each due date.
- Rule-based deadline calculator over a central statutory-rule config; fingerprint idempotency prevents duplicate events on repeated runs.
- Async Celery Beat pipeline, timezone-correct; delivery guarded by consent checks, a kill switch, and database-level duplicate constraints.
- Data minimisation by design: masked phone storage with a paginated, filterable admin delivery log for auditing.
- 301-test Pytest suite across unit and integration layers; migrations version-controlled with Flask-Migrate. 🐙 github.com/MANANSHARMA275/minerallaw

Tokenmeter — LLM Inference Cost Calculator | JavaScript, HTML, CSS — zero dependencies

2026

- Computes monthly LLM cost across six model tiers — live recomputation, budget-based recommendation, USD/INR, editable rates verified against provider pages. 🌐 manansharma275.github.io/Tokenmeter
- Fixed a spec-level focus-loss race in live table reordering via caret-preserving re-renders and guarded input validation; keyboard-accessible, verified in headless Chromium. 🐙 github.com/MANANSHARMA275/Tokenmeter

Food Delivery Time Prediction | Python, CatBoost, Streamlit

- Regression model on 45,593 orders; engineered geo features (haversine and Manhattan-proxy distance, buckets) and repaired invalid coordinates via city-wise median.
- CatBoost reached MAE 5.70 min and RMSE 7.26 (R^2 0.40) on a 20% held-out split — 7.3% better RMSE than linear regression, 4.4% than Random Forest.
- Deployed as a Streamlit app with live ETA prediction and input validation. 🐙 github.com/MANANSHARMA275/food-delivery-eta-prediction

Certifications

Machine Learning with Python | IBM / Coursera

October 2024

Mastering Data Structures & Algorithms using C and C++ | Udemy — Abdul Bari

Feb 2026 – Present

100 Days of Code: The Complete Python Pro Bootcamp | Udemy — Dr. Angela Yu

Feb 2026 – Jul 2026

Achievements & Activities

- Identified the MineralLaw.in opportunity independently — existing portals serve regulators, not small lease holders — and built it from an empty repository.
- Work with AI coding assistants under a specification-and-review workflow: plan first, review the implementation against the plan, verify every change before commit.
- Built and presented prototypes in two-person teams under hackathon conditions, including YOLO Pune 2026 at MIT-WPU.
